

SYNCHRONOUS MOTORS

EVERCOM's Synchronous Motors are compact, Inductor motors with built in gears. They deliver high torque output with very low power consumption, low noise, low cost, and long lifetime. Everything is self-contained within the simple and compact package, with no condensers or other peripheral components necessary. Since these are high-response condenser-run motors, they are characterized by quick response starts, and the ability to switch between forward and reverse rotation direction. Precision gears and motor are packaged in a simple design, compact body. Available in wide speed ranges at reasonable costs.

FEATURE :

- Switchable forward and reverse revolution.
- In various speed specification
- Compact ,yet powerful.
- High response, low power consumption.
- Low noise, long life.
- All spec. in accord with JIS,CE.
