

## PNEUMATIC POWER TOOLS

In 1990, PICK Power Tools started to manufacture full ranges of pneumatic tools for DIY, professional, and industrial uses. Several advanced CNC machines, hooked with robotic and measuring systems, run 24 hours a day to ensure high-quality parts.

In the 1995, we manufactured and exported more than 500,000 pieces of air tools worldwide, and posted an 30% annual growth in 1996.

Our twin-hammer mechanism impact wrenches play a main role in the worldwide market. Their square drives have been diversified from 3/8 square inch to 1-1/2 square inches. With well-organized sales and R&D teams, we create new products or improve existing products quarterly. Also, we offer you complete OEM/ODM services from R&D, design and manufacture to inspection and aftersales.
